DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed Sept. 9, 2003 have been fully considered but they are not persuasive.

In re pages 7-10, applicants argue that the applied reference fails to teach or suggest a device in which first type data is superimposed in a first mode and first and second type data are superimposed in a second mode, and the position in which the first type data is superimposed in the first mode differs from the position in which the first type data is superimposed in the second mode and a device in which, depending on the display mode, the position at which character information is displayed is varied, even when the character information is not changed.

In response, the examiner respectfully disagrees. As discussed in the last Office Action, Shimada et al discloses in col. 4, lines 1-12 that DATA 1 is recorded in mode "01" and DATA1 and DATA2 are recorded in mode "11". The amount of DATA 1 in mode "01" and DATA 2 in mode "11" are different. The position at which the data of the first type (DATA 1 in mode "01") is superimposed on a display screen in the first mode and the position at which the data of the first type (DATA 1 and DATA 2 in mode "11") is superimposed on a display screen in the second mode are different from each other because the amount of data (DATA 1 in mode "01" and DATA 1 and DATA 2 in mode "11") in two modes (mode "01" and mode "11") are different.
